

LMx24, LMx24x, LMx24xx, LM2902, LM2902x, LM2902xx, LM2902xxx

Quadruple Operational Amplifiers

1 Features

- Next-generation LM324B and LM2902B
- B versions are drop-in replacements for all versions of LM224, LM324, and LM2902
- Improved specifications of B version
 - Supply range: 3V to 36V (B, BA versions)
 - Low input offset voltage: $\pm 2\text{mV}$ (BA version) / 3mV (B version)
 - ESD rating: 2kV (HBM), 1.5kV (CDM)
 - EMI rejection: integrated RF and EMI filter
 - Low input bias current: 50nA maximum (across -40°C to $+125^{\circ}\text{C}$)
- Common-mode input voltage range includes V_{-}
- Input voltage differential are drivable up to the supply voltage
- For dual B versions, see [LM358B](#) and [LM2904B](#)

2 Applications

- [Merchant network and server power supply units](#)
- [Multi-function printers](#)
- [Power supplies and mobile chargers](#)
- [Desktop PC and motherboard](#)
- [Indoor and outdoor air conditioners](#)
- [Washers, dryers, and refrigerators](#)
- [AC inverters, string inverters, central inverters, and voltage frequency drives](#)
- [Uninterruptible power supplies](#)

3 Description

The LM324B and LM2902B devices are the next-generation versions of the industry-standard operational amplifiers (op amps) LM324 and LM2902, which include four high-voltage (36V) op amps.

These devices provide outstanding value for cost-sensitive applications, with features including low offset ($600\mu\text{V}$, typical), common-mode input range to ground, and high differential input voltage capability.

The LM324B and LM2902B are unity-gain stable and achieve a low offset voltage maximum of 3mV (2mV maximum for LM324BA and LM2902BA) and quiescent current of $240\mu\text{A}$ per amplifier (typical). High ESD (2kV HBM and 1.5kV CDM) and integrated EMI and RF filters enable the LM324B and LM2902B devices to be used in the most rugged, environmentally challenging applications.

The LM324B and LM2902B can drop-in replace all versions of the LM224, LM324, and LM2902 devices.

Lead temperature 1.6mm (1/16 inch) from case for 60 seconds	J or W package		300		300		°C
Storage temperature, T_{stg}	–65	150	–65	150	–65	150	°C

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltage values (except differential voltages and V_{CC} specified for the measurement of I_{OS}) are with respect to the network GND.
- (3) Differential voltages are at $IN+$, with respect to $IN-$.
- (4) Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.

6.2 ESD Ratings

			VALUE	UNIT
LM324B, LM324BA, LM2902B, LM2902BA, LM224K, LM224KA, LM324K, LM324KA, LM2902K, LM2902KV, LM2902KAV				
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±1000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	
LM124, LM124A, LM224, LM224A, LM324, LM324A, LM2902				
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±500	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.
- (2) Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.
- (3) Maximum power dissipation is a function of T_{J(max)}, R_{θJA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_{J(max)} – T_A) / R_{θJA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (4) Maximum power dissipation is a function of T_{J(max)}, R_{θJA}, and T_C. The maximum allowable power dissipation at any allowable case temperature is P_D = (T_{J(max)} – T_C) / R_{θJC}. Operating at the absolute maximum T_J of 150°C can affect reliability.

6.5 Electrical Characteristics for LM324B and LM324BA

for $V_S = (V+) - (V-) = 5V$ to $36V$ ($\pm 2.5V$ to $\pm 18V$), at $T_A = 25^\circ C$, $V_{CM} = V_{OUT} = V_S / 2$, and $R_L = 10k$ connected to $V_S / 2$ (unless otherwise noted)

8 Detailed Description

8.1 Overview

These devices consist of four independent high-gain frequency-compensated operational amplifiers that are designed specifically to operate from a single supply over a wide range of voltages. Operation from split supplies is also possible if the difference between the two supplies is 3V to 36V (B and BA versions), 3V to 26V (for LM2902 devices), or 3V to 30V (for all other devices), and V_{CC} is at least 1.5V more positive than the input common-mode voltage. The low supply-current drain is independent of the magnitude of the supply voltage.

Applications include transducer amplifiers, DC amplification blocks, and all the conventional operational-amplifier circuits that can be more easily implemented in single-supply-voltage systems. For example, the LM324B and LM2902B devices can be operated directly from the standard 5V supply that is used in digital systems and provides the required interface electronics, without requiring additional $\pm 15V$ supplies.

8.2 Functional Block Diagram

COMPONENT COUNT (total device)	
Epi-FET	1
Transistors	95
Diodes	4
Resistors	11
Capacitors	4

ESD protection cells - available on B, BA, and K versions only

8.3 Feature Description

8.3.1 Unity-Gain Bandwidth

To calculate the gain bandwidth product, multiply the measured bandwidth of an amplifier by the measured bandwidth gain. These devices have a high gain bandwidth of 1.2MHz.

8.3.2 Slew Rate

The slew rate is the rate at which an operational amplifier changes the output when there is a change on the input. These devices have a 0.5V/μs slew rate.

8.3.3 Input Common-Mode Voltage Range

The valid common-mode voltage range is from device ground to $V_{CC} - 1.5V$ ($V_{CC} - 2V$ across temperature). Inputs are able to exceed V_{CC} up to the maximum V_{CC} without device damage. Ensure that at least one input is in the valid input common-mode voltage range for the output to be in the correct phase. If both inputs exceed the valid range, then the output phase is undefined. If either input is less than $-0.3V$, limit the input current to 1mA, and the output phase is undefined.

8.4 Device Functional Modes

These devices are powered on when the supply is connected. This device operates as a single-supply operational amplifier or dual-supply amplifier depending on the application.

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

The LMx24 and LM2902 operational amplifiers are useful in a wide range of signal conditioning applications. Inputs are able to be powered before VCC for flexibility in multiple supply circuits.

9.2 Typical Application

A common application for an operational amplifier is an inverting amplifier. This amplifier takes a positive voltage on the input, and produces a negative voltage with the same magnitude. In the same manner, the amplifier also makes negative voltages positive. A linear gain can be achieved by changing the resistor ratio in the feedback path.

Figure 9-1. Application Schematic

9.2.1 Design Requirements

The supply voltage must be chosen such that the supply voltage is larger than the input voltage range and output range. For instance, this application scales a signal of $\pm 0.5\text{V}$ to $\pm 1.8\text{V}$. Setting the supply at $\pm 12\text{V}$ is sufficient to accommodate this application.

9.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier using [Equation 1](#) and [Equation 2](#):

$$A_V = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$A_V = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

After the desired gain is determined, choose a value for R_I or R_F . Choosing a value in the $\text{k}\Omega$ range is desirable because the amplifier circuit uses currents in the mA range. This choice does not draw too much current. This example chooses $10\text{k}\Omega$ for R_I , which means $36\text{k}\Omega$ is used for R_F . These values are determined by [Equation 3](#).

$$A_V = \frac{R_F}{R_I} \quad (3)$$

9.2.3 Application Curve

Figure 9-2. Input and Output Voltages of the Inverting Amplifier

9.3 Power Supply Recommendations

CAUTION

Supply voltages greater than 32V for a single supply, or outside the range of $\pm 16\text{V}$ for a dual supply, are able to permanently damage the device. Do not exceed the absolute maximum ratings listed in [Section 6.1](#).

Place 0.1 μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see [Section 9.4](#).

9.4 Layout

9.4.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise is able to propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Use bypass capacitors to reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
 - Connect low-ESR, 0.1 μ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are typically devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If keeping the traces separate is not possible, cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keep RF and RG close to the inverting input to minimize parasitic capacitance (see also [Section 9.4.2](#)).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring helps significantly reduce leakage currents from nearby traces that are at different potentials.

9.4.2 Layout Examples

10.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](https://www.ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

10.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

10.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

10.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision AD (October 2024) to Revision AE (September 2025)	Page
• Changed LM324B and LM2902B RTE (WQFN, 16) package from preview to production data (active).....	1
• Added note 2 to <i>ESD Ratings</i>	5
• Changed human body model (HBM) from $\pm 2000V$ to $\pm 1000V$ in <i>ESD Ratings</i>	5
• Updated <i>Typical Application</i> description.....	24

Changes from Revision AC (March 2024) to Revision AD (October 2024)	Page
• Deleted the D (SOIC, 14) package preview note from the B and BA devices.....	1

Changes from Revision AB (November 2023) to Revision AC (March 2024)	Page
• Added preview note to the WQFN-16 package pinout.....	3
• Added LM324BIRTER and LM2902BIRTER preview information to the <i>Mechanical, Packaging, and Orderable Information</i> section.....	29

Changes from Revision AA (September 2023) to Revision AB (November 2023)	Page
• Changed the status of LM324BA and LM2902BA from: preview to: active.....	1

Changes from Revision Z (April 2023) to Revision AA (September 2023)	Page
Deleted preview note from TSSOP-14 BA devices in <i>Device Information</i> table.....	1
Changed the format of the <i>Package Information</i> table to include package lead size.....	1

Changes from Revision Y (October 2022) to Revision Z (April 2023)	Page
Added WQFN-16 package in the <i>Package Information</i> table.....	1
Added WQFN-16 package details to <i>Pin Configuration and Functions</i> section.....	3
Added additional graphs for LM324Bx and LM2902Bx to <i>Typical Characteristics</i>	14

Changes from Revision X (May 2022) to Revision Y (October 2022)	Page
Deleted preview note from TSSOP-14 B devices in <i>Device Information</i> table.....	1
Updated <i>Description</i> information.....	1
Updated LM324B and LM324BA <i>Electrical Characteristics</i> table for RTM revision.....	7
Updated LM2902B and LM2902BA <i>Electrical Characteristics</i> table for RTM revision.....	9
Added graphs for LM324Bx and LM2902Bx to <i>Typical Characteristics</i>	14

Changes from Revision W (March 2015) to Revision X (May 2022)	Page
Updated <i>Features</i> to include the B and BA versions.....	1
Added application links to <i>Applications</i> section.....	1
Corrected available packages in the <i>Device Information</i> table.....	1
Added B and BA versions to <i>Device Information</i> table.....	1
Updated package images in the <i>Pin Configuration and Functions</i> section to new format - no specification changes.....	3
Changed GND and Vcc to Vcc- and Vcc+, respectively, in the <i>Pin Functions</i> table	3
Added B and BA versions to <i>Absolute Maximum Ratings</i> table	5
Added B and BA versions to <i>Recommended Operating Conditions</i> table	6
Added the <i>Electrical Characteristics - LM324B and LM324BA</i> table	7
Added the <i>Electrical Characteristics - LM2902B and LM2902BA</i> table.....	9
Removed <i>Documentation Support</i> and <i>Related Links</i> in the <i>Device and Documentation Support</i> section.....	27

Changes from Revision V (January 2014) to Revision W (March 2014)	Page
Added <i>Applications</i>	1
Added <i>Device Information</i> table.....	1
Added <i>Mechanical, Packaging, and Orderable Information</i> section.....	29

Changes from Revision U (August 2010) to Revision V (January 2014)	Page
Updated document to new TI data sheet format - no specification changes.....	1
Updated <i>Features</i>	1
Updated <i>Features</i>	1
Deleted <i>Ordering Information</i> table.....	3
Added <i>Pin Functions</i> table	3

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser based versions of this data sheet, refer to the left hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
77043012A	Active	Production	LCCC (FK) 20	55 TUBE	No	SNPB	N/A for Pkg Type	-55 to 125	77043012A LM124FKB

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF LM124, LM124M, LM2902, LM2902B, LM2902BA :

- Catalog : [LM124](#)
- Automotive : [LM2902-Q1](#), [LM2902B-Q1](#), [LM2902BA-Q1](#)
- Enhanced Product : [LM2902-EP](#)
- Military : [LM124M](#)
- Space : [LM124-SP](#), [LM124-SP](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Enhanced Product - Supports Defense, Aerospace and Medical Applications
- Military - QML certified for Military and Defense Applications
- Space - Radiation tolerant, ceramic packaging and qualified for use in Space-based application
